

## Probe,NMC,DWH and NRS time

- Time zones of NMC/DWH/NRS servers must be identical and also their clocks.
- We offer through the robot properties tool the possibility to set a time synchronization between probes and NMC server.

Thus, at each probe start up, the clock will be synchronized.

However, in some cases, the clock can shift during the day and the probe state will be seen as monitoring off.

This is why we advise you to synchronize all Newtest products with an unique NTP server.
